

FLOOD FORECASTING February 8th – February 27th, 2014

Saturday, February 8, 7:30 AM. Today's forecast calls for rain today and throughout the night of 1.5-3 inches. Ordinarily this amount of rain may cause flooding in areas that are prone to flooding, however, the dry conditions of the soil make this less likely. Watch our webpage and the phone message if conditions change. Some areas of the County can flood due to high intensity rains in areas with poor drainage even if there is no flooding in the rest of the County, this is particular to rural areas with poor drainage conditions.

Thursday, February 27, 2:00 PM. Rain Friday, up to 1 1/4 inch forecasted. This amount of rain could cause flooding in areas subject to flooding.
